

VSP Veneer System Panel

Important Information

We strive to continually improve the quality and durability of our furniture so that we provide customers with timber products that last a lifetime.

We currently use a floating panel system on our furniture which allows timber to expand and contract when natural fluctuations in humidity & temperature occur.

This system proves effective in 99% of our stock but occasionally under exceptional circumstances (usually beyond customers control) panel movement can surpass the acceptable guidelines stated in our terms and conditions.

As a result, we offer VSP Furniture at no additional cost, as an option on all Oak collections:

VSP furniture features solid oak veneered tops, floated on a waterproof MDF base. Frames, legs, drawers and doors will still be manufactured using solid oak.

VSP furniture aims to increase functionality and overall customer satisfaction. Make sure you visit our showrooms to view the samples we are confident you will agree that VSP is a positive choice.
